PROFESSIONAL SUMMARY

Capital markets professional with 4+ years across trade surveillance, exchange operations, and compliance technology at institutional financial services firms. Combines second-line surveillance depth — enhancing & monitoring surveillance systems & alerts across multiple asset classes like equities, ETD, fixed income, and forex — with automation tools applied directly to compliance and operational workflows. Independently builds and operates algorithmic trading systems and applied ML models on market data, bridging domain expertise with quantitative and engineering skills relevant to fintech, risk, and BA/systems roles.

CORE COMPETENCIES

Trade Surveillance (SMARTS) · Market Abuse Typologies · Alert Review & Disposition · E-Communications Surveillance · ETD · Equities · Fixed Income · Forex & Swaps · Exchange Operations & Controls · Trade Operations · Regulatory Inquiry Response · SEBI / NSE Frameworks · UAT & Control Validation · Business & Systems Analysis · Python · SQL · Excel · Power BI · Machine Learning (Sklearn) · QWEST · Trade Explorer

WORK EXPERIENCE

Risk & Compliance Associate

Morgan Stanley | May 2025 – Nov 2025

- Operated and enhanced the EMEA trade surveillance framework across equities, ETD, fixed income, forex, and swaps — driving alert quality improvements, refining disposition logic, and strengthening the overall control environment across 100–150 daily alerts.
- Led market abuse investigations covering spoofing, front running, and insider trading — reconstructing complex trade timelines across SMARTS, QWEST, and Trade Explorer to produce structured case findings for escalation and potential disciplinary referral.
- Contributed to surveillance control design and audit readiness by engineering a Python-based validation automation that reduced manual review effort by ~40%; conducted systematic closure-code and data-quality audits to reinforce control consistency.
- Managed electronic communications surveillance across firm and employee channels, identifying behavioural risk indicators and filing escalation cases; supported preparation of regulatory and governmental inquiry responses with structured trade data analysis and event timeline reconstruction.

Deputy Manager — Trade Operations & Surveillance Controls

National Stock Exchange of India (NSE) | Mar 2024 – Apr 2025

- Worked directly on the exchange-level trading system to implement risk and regulatory parameter changes — including price bands, quantity freeze limits, operating range thresholds, and circuit-breaker configurations — ensuring accurate downstream reflection across equity and ETD segments in line with SEBI guidelines.
- Drove end-to-end UAT and post-deployment validation for surveillance system upgrades and platform enhancements, owning test design, defect identification, and sign-off in collaboration with technology and business stakeholders.
- Investigated abnormal trading events involving price threshold breaches, order-limit violations, and market protection triggers — classifying severity, documenting root cause findings, and coordinating resolution across operations and technology teams.
- Prepared exchange-level and SEBI regulatory inquiry responses under deadline pressure — extracting and analysing trade data, system logs, and event timelines to produce structured compliance submissions.

Analyst — Exchange Fee & Billing Analytics (Contract)

Goldman Sachs | Jan 2023 – Sep 2023

- Managed exchange fee and billing analysis across U.S. and European equities — delivering accurate fee calculations, control-focused reconciliations, and structured reporting; developed accrual and estimation models using historical volumes and fee schedules.

Process Analyst — Trade Operations & Controls

Broadridge Financial Solutions | Sep 2021 – Dec 2022

- Resolved transaction mismatches by analysing settlement history, corporate action records, and trade data; validated new securities onboarding and transaction flows through structured readiness checks and control-focused process reviews.
-

SELECTED PROJECTS

Intraday Regime Clustering & Position Sizing Framework (Python, Sklearn)

- Designed and executed a three-pass K-Means clustering study on 10 years of Nifty 50 intraday data (~2,500 trading days) to classify day-types by quality and identify low-quality regimes driving disproportionate losses.
 - Engineered exclusively ex-ante features — observable at entry time — enabling the regime classifier to operate as a live pre-trade signal; deployed as a position-sizing filter (reduced size in weak regimes, full size in strong).
 - Outcome: filtering the weak regime raised profit factor from 1.40 → 1.58 and reduced bad-day frequency, with nested sub-cluster analysis used to isolate the most toxic pocket within the weak regime.
-

CERTIFICATIONS

IBM Certified Data Science & Machine Learning · IBM Generative AI Engineering · NISM AML — Transaction Monitoring & STR (in progress)

EDUCATION

MBA, International Business

CMS Business School, Jain University, Bengaluru | 2020

BBA, General

Swami Vivekananda Subharti University | 2018
